Part One – WPKingSlider?

WPKingSlider is a WordPress Plugin Which Creates WoWsome Image Sliders. It has 152 effects with 3D support.

WPKingSlider has an intelligent mechanism which fallback to supported effects automatically according to browser features. Right now, only Safari (Mac, PC & iOS), Chrome & Rockmelt has support for 3D effects. If someone visits your site by using FireFox, then the intelligent mechanism will fallback to 2D /noCSS3/mobile effects.

Enjoy the flexibility!

Features:

- ✔ 152 WoWSome Effects With **3D Support**.
- ✔ Works In All The Major Browsers.
- ✔ Automatic Fallback According To Browser Features.
- ✔ Fully Responsive. Works Seamlessly In Apple Devices.
- ✔ Captions with HTML support, Pagination, Autoplay Features.
- ✔ Define Image Link.
- ✔ GUI is more than user-friendly.
- ✔ 5 Different Built-in Slider Designs.
- ✔ Fully Configurable.
- ✔ Fully Customizable.
- ✔ ShortCode Support.
- ✔ PHP Template Tag Support.
- ✔ Widget Support.

Version History:

WPKingSlider v1.0

Initial Release.

Part Two – Requirements

Web Server Requirements:

Operating System: Linux, Unix, or Windows

Web Server: Apache

Scripting Language: PHP 5.0 or above

Database: MySQL 5.0 or above

PHP Extension: cURL

Write Permission (CHMOD)

* If you're unsure whether your server meets these requirements, simply check the “Compatibility Checker” submenu of WPKingSlider.

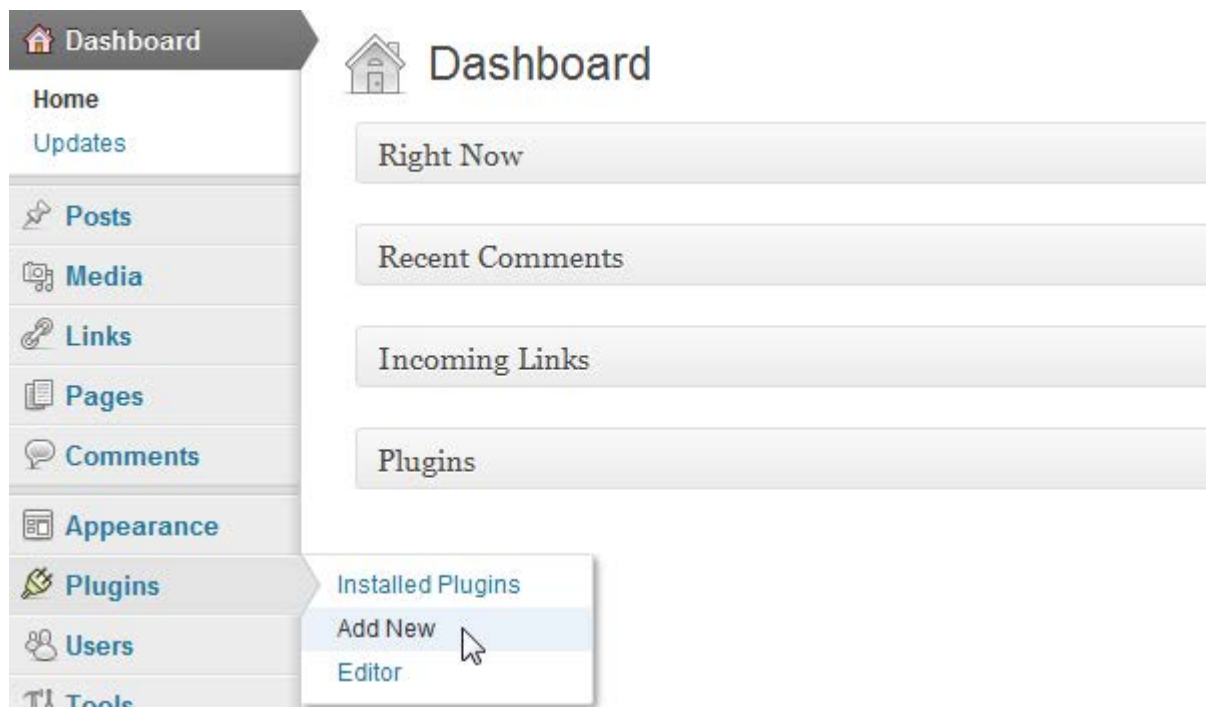

[Part Three – Installing WPKingSlider](#)

You may like to watch this installation video: [Installation Video](#)

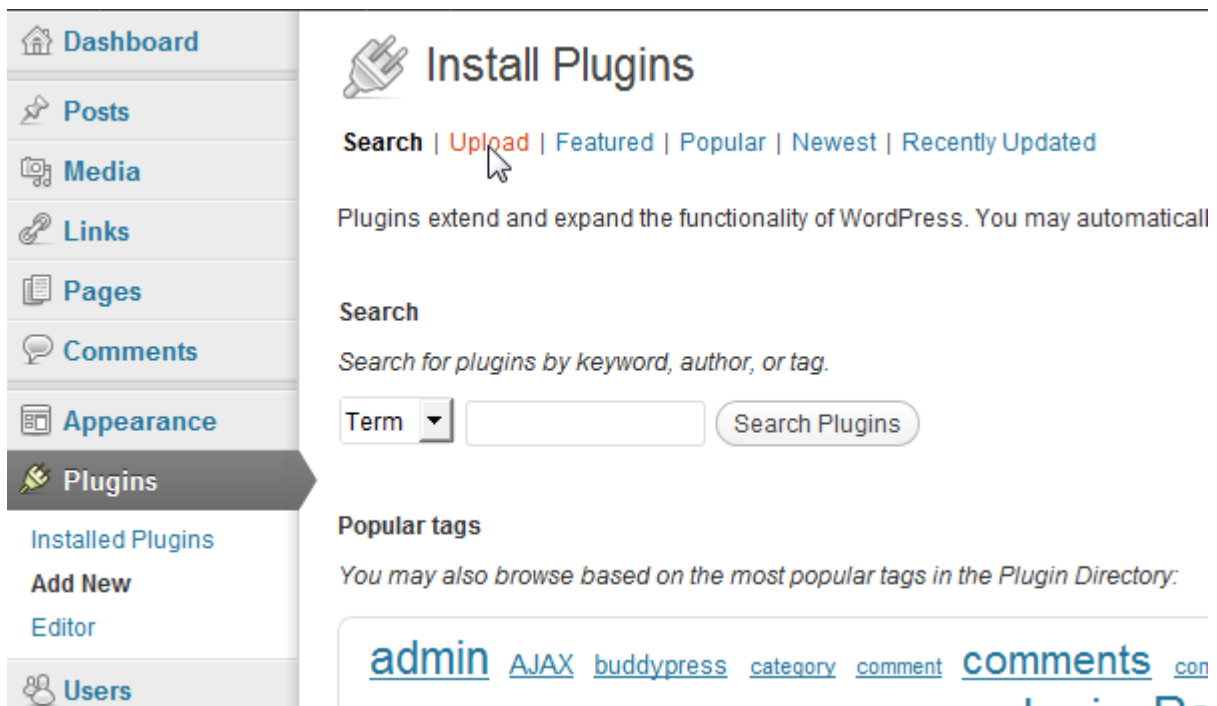

Step 1 – Download WPKingSlider. Simply make a note of where you downloaded & stored WPKingSlider.

Step 2 – Log into your Wordpress Admin Panel.

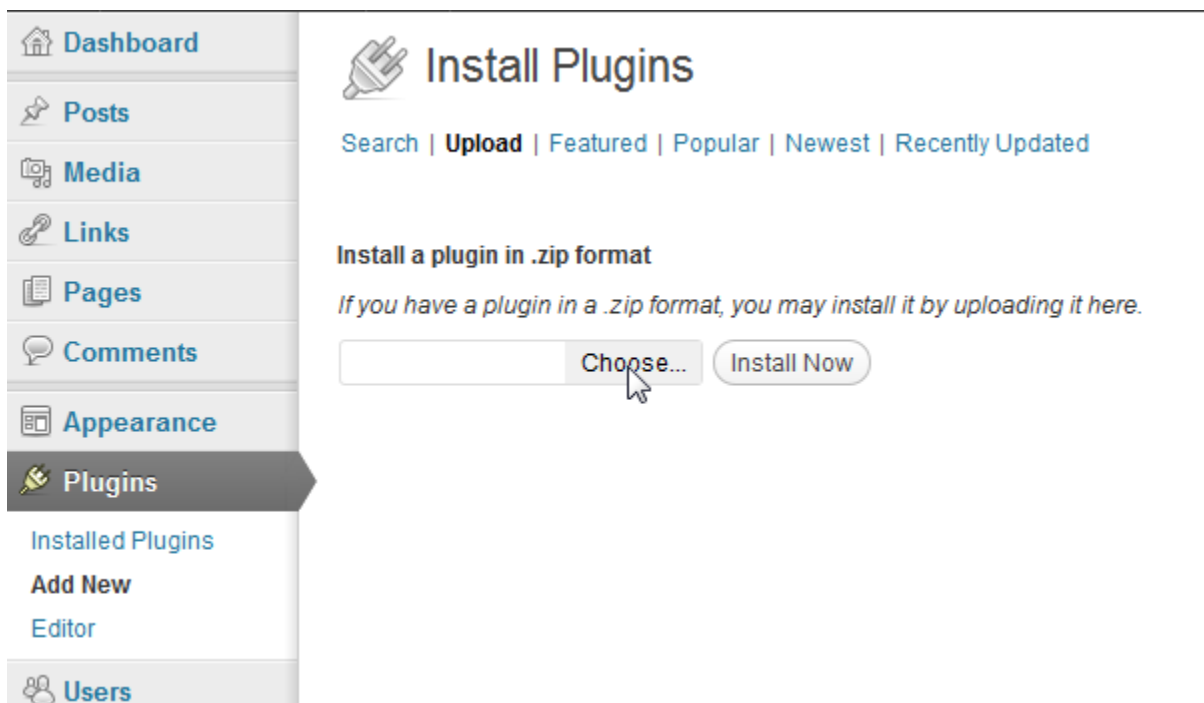

Step 3 – Click the “Add New” Plugin link.

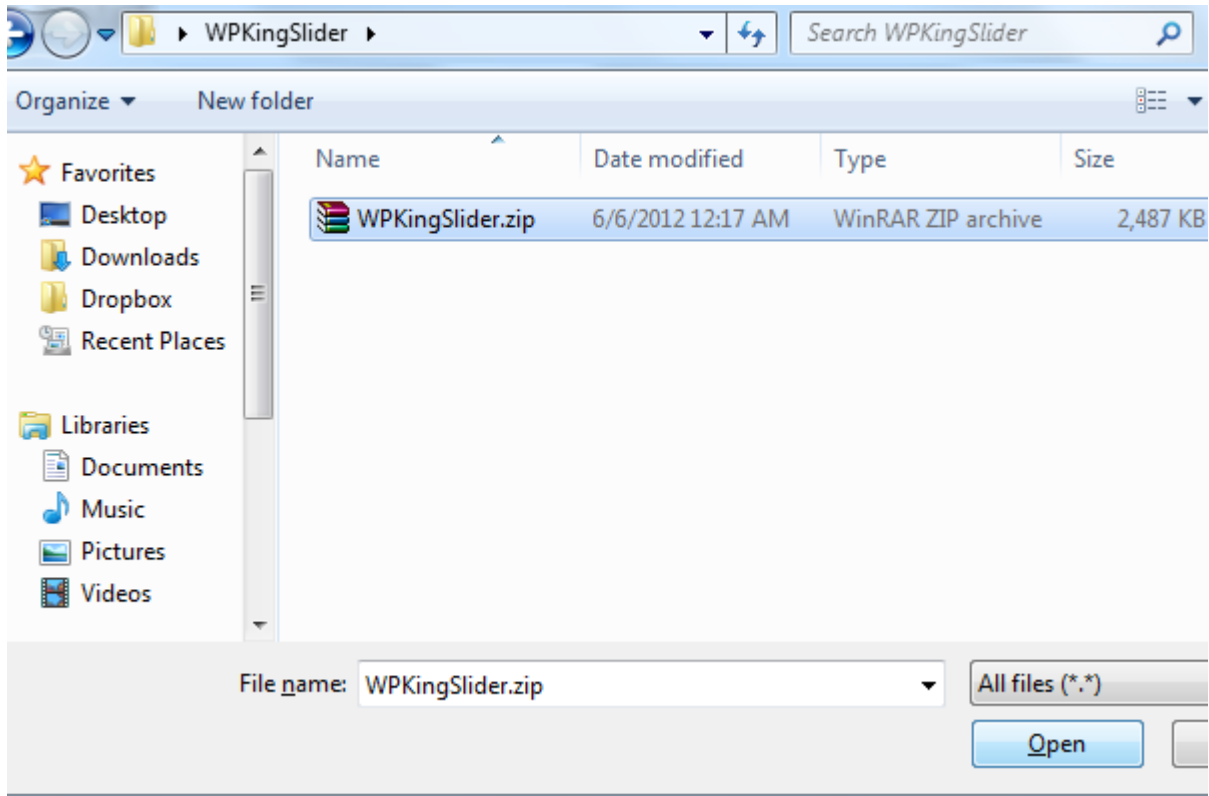

Step 4 – Click the “Upload” link.

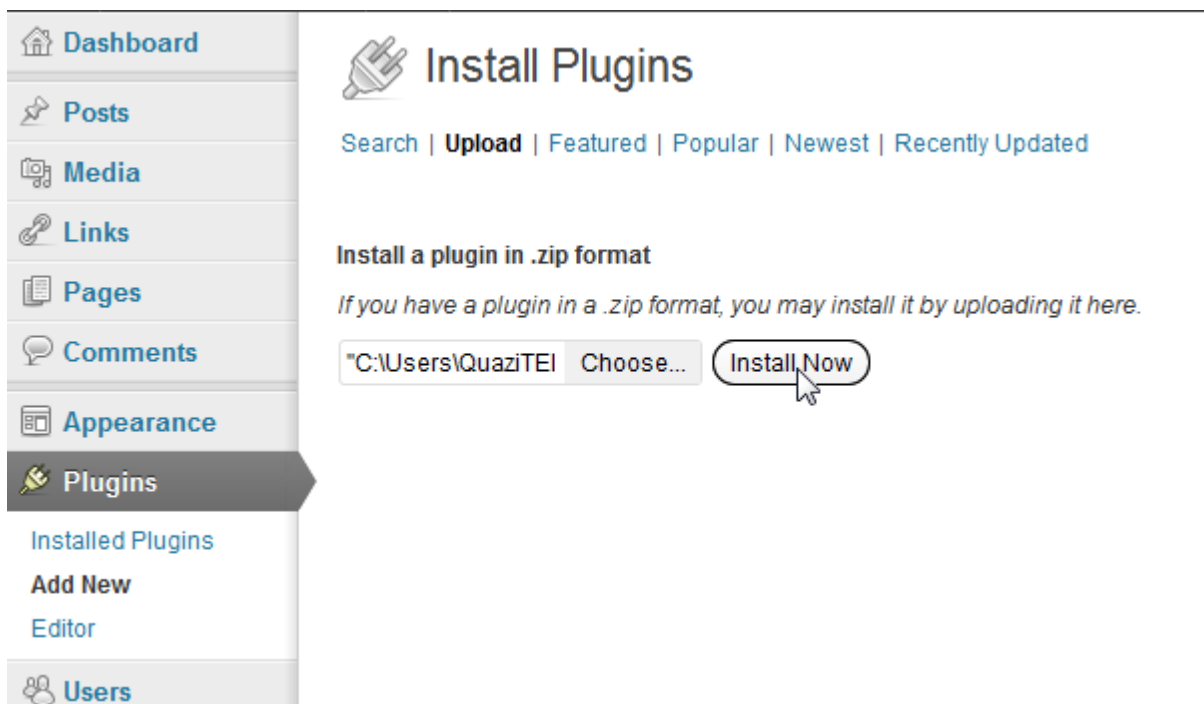

Step 5 – Click the “Choose File” button.

Step 6 – Locate & Select “WPKingSlider.zip” file, then click “Open”.

Step 7 – Click the “Install Now” button.

Step 8 – Click the “Activate Plugin” button.

The screenshot shows the WordPress dashboard sidebar on the left with 'Plugins' selected. The main content area displays the installation progress for 'WPKingSlider.zip'. The progress steps are: 'Unpacking the package...', 'Installing the plugin...', and 'Plugin installed successfully.'. Below the progress, there are two links: 'Activate Plugin' (highlighted with a mouse cursor) and 'Return to Plugins page'.

Step 9 – Installation complete!

The screenshot shows the WordPress 'Plugins' page. A yellow notification banner at the top says 'Plugin activated.'. Below the banner, the text 'All (1) | Active (1)' is displayed. There is a 'Bulk Actions' dropdown menu and an 'Apply' button. A table lists the installed plugins:

Plugin	Description
<input type="checkbox"/> WPKingSlider Deactivate Edit	WoWSome Image Slider With 152 Effects, Includes 3D Support. Version 1.0 By Quazi Touheed Visit plugin site

Part Seven – FAQ

I don't know why WPKingSlider isn't working. What might be the problem?

Most of the time, any other plugin is conflicting with WPKingSlider. In such a situation, please raise a ticket from [HERE](#). Please send any of the following info while you submit a ticket.

1. Send your wordpress admin url, username & password
2. Complete list of active plugins & theme (if you feel insecure to sent access info).

Will there be any updates of WPKingSlider? Who are eligible for updates?

YES! Updates include features requested by members using the built-in features request system.

Every license type is eligible for the updates. Cheers!

Which hosting server OS is better for WPKingSlider? Windows or Linux?

Linux is obviously better for both WPKingSlider & WordPress.

Can I change WPKingSlider skins? If yes, how?

Yes, you can indeed by using CSS classes. You must have good knowledge in CSS.

More Stuffs

If you experience problems uploading files, please check these:

1. Make sure Directory has correct write permissions (**wp-content** folder)
2. Make sure your server is configured for file uploads

Uploading Files (Manually Using FTP Client)

Unzip the WPKingSlider files into your local hard drive. If you don't have Winzip, you can download it for free [here](#). Using an FTP program (such as Filezilla, which is free, or a commercial package such as CuteFTP), login to your web server and copy the folder with files into your base website root directory. This directory is commonly called 'public_html', 'html', 'www' or 'website_html'. If you're not sure what it is, your webhost provider will be able to tell you.

File Permissions

If you're running on a Linux or Unix web host, you can use your FTP program and use the 'CHMOD' ('Change Mode') function to enable write permissions. If your host is running Windows, you may need to contact with your hosting provider for setting up write permissions on these files/folders:

CHMOD "WP-CONTENT" folder to 777.

Note: Although it says 777, some webhosts may require 755 or 757 instead.
